About us

We help developers, electrical contractors, electrical engineers and service providers to deliver successfully on their projects by supplying infrastructure equipment across Australia. Our business is built on foundational values reflecting respect, trust and integrity, coupled with a team of professionals who have a long track record of delivering sustainable pricing and quality products.

Today, we're truly honoured that many businesses trust us to assist them in their energy infrastructure projects. They rely on us for a range of project requirements, from a small sub-division lot through to larger privately-operated assets with voltage classes @ 11kV, 22kV, 33kV, 66kV, 110kV and 132kV. Further, our customers trust us to provide the necessary technical support and quality assurance services underpinned by warranties. We are constantly striving to achieve the best value for money through continuous improvement of products, supply chain refinement and material bundling.

With our expansive supplier network and over 27,000 energy related products, distributed via six bulk warehouses and many secondary distribution points, we are a one-stop-shop for your energy infrastructure projects.

Our competitive advantage

We offer the strength of a respected organisation with the personal approach of a local partner. Through understanding the markets in which we operate as well as your business requirements, we continue to work hard to be the leading one-stop-shop that can meet your energy infrastructure project's needs.

Our products

Our extensive product range includes new and used distribution and power transformers, power cables (underground/overhead), switchgear, streetlights, poles (timber, concrete and steel) and a comprehensive range of associated materials. We also have a large network of key suppliers who can manufacture customised plant and materials.

Our products are sourced from local, national and international manufacturers with ISO9001 accreditation, all of whom are respected for the quality and safety of their products. We provide our customers a high level of quality assurance with documentation in the form of drawings, type test and factory acceptance testing certification. We can also provide technical support and a quality assurance service, with warranties for all of our range.

To ensure we supply only the best quality products, you can be assured that

- all materials supplied are Quality Management Systems ISO9001 accredited, and
- all materials meet Australian Standards.

Our 'customer first' ethos

We understand that every project is different and, likewise, every customer has a unique set of requirements in energy infrastructure plant and materials. That's why, we're committed to stay at the forefront of rapid and ever-evolving technology – ensuring we can provide the best possible service by recommending, sourcing and supplying the right solution every time.

Our team has extensive knowledge and experience in the supply of plant and materials. We know what materials are required and all of our products are backed by a team in technical experts and materials quality assurance. This means we can promptly respond to your queries and quote requests.

Strong relationship management principles

- Focus on understanding your business needs,
- Dedicated sales team who focus on creating a strong link between your business and ours, and
- Single point of contact to meet your business demands.

Commitment to continually serve you better

Our commitment to staying at the forefront of technology ensures we're able to provide you with cost effective solutions and access to high-quality materials for your business or project. We're aware that each of our clients has different and unique needs and we aim to develop a flexible, personalised solution that's tailored to meet your specific requirements.

Our manufacturers

All materials are purchased from trusted suppliers. We have a large network of key suppliers who provide high quality, cost effective materials. All materials are designed and manufactured to meet required industry specifications and Australian Standards.
